

# INTELLIGENT IN-LINE TORQUE TRANSDUCER

## DESCRIPTION

The AWS LTD Intelligent In-Line Torque Transducer range (IITT), are designed to accurately measure torque values, in a variety of industries. With optimised torque ranges, the transducer contains our Intelligent Instrumentation Package, outputting using CAN-BUS protocol to communicate with the AWS LTD Professional Transducer Display (PTD). This digital communication eliminates signal loss when using long lengths of cable, providing flexibility in communicating with other devices and systems. There is an option (using the ITMB, purchased separately) to bench mount the transducer in either a vertical or horizontal position. The vertical position allows it to be mounted in ISO torque wrench calibration machines.
