

# N-TYPE ROTARY TORQUE TRANSDUCER

## DESCRIPTION

The AWS LTD N-type Rotary Torque Transducer range (NRTT), are designed to accurately measure torque values in a rotating shaft, in a variety of industries. With optimised torque ranges, the transducer outputs a mV signal proportional to the supply voltage and torque. The transducer contains a memory chip in which a small selection of parameters, including serial number, model number, and calibration value, are held, compatible for setting some manufacturers display units. The NRTT can be produced with different adapters depending on its use including square (standard) and keyway (option).
